

**Partial Seal Recovery Configuration**

**Once-Thru Configuration (w/separator)**

**Seal fluid Operating Modes:** When you purchase the optional discharge separator it is possible to recover up to 40% of the seal fluid by connecting the overflow drain pipe to the seal fluid port on the pump. It is important to connect the cavitation protection hose, or when not using a separator to connect a vacuum breaker on the inlet side of the pump.

**Once-Thru Configuration (w/o separator)**
